

1-Day Course Program

# PRO Combined Manicure Algorithm

Technical deepening. Improvement.  
Application of rigid materials

This course is designed for **active nail technicians** who already master the combined manicure technique, know how to work with an e-file and scissors, are familiar with drill bits, and perform nail plate leveling using gel polish base.

It is **not a beginner's course**, but rather the next step in your professional growth: a program **focused on strengthening foundational knowledge and acquiring more advanced techniques, especially in the use of rigid materials.**

## Who is this course for?

- For those who **don't feel confident working** with rigid materials such as gel or polygel
- For those who want to **learn how to strengthen and repair** the nail plate
- For those who need knowledge about crack **repair, corner reconstruction, and correction of shape and sidewalls**
- For nail technicians who want to take their combined manicure technique to the next level and achieve flawless, professional results

**Practice on 2 invited models.**  
**All materials are included in the price**

**Course objective:**  
Take your technique to a professional level

Training from 10:00 to 19:00  
with a lunch break.  
Get ready to work hard!

- We will analyze your current mistakes and your individual technical characteristics
- We will refresh your knowledge and skills in combined manicure
- You will learn to use gel and polygel as complementary tools to perfect your technique, not as a substitute for extensions
- We will help you work confidently on complicated nails: with cracks, deformations, and lack of structure

**⚠ Important:** this course does not teach full extensions or correction with gel

For those topics, we offer specific programs:

**“Gel Correction Without Filing”**

**“Extensions with Lower Forms”**

**The main objective of this level** is to learn how to properly apply rigid materials to reinforce, repair, and level the nail within the combined manicure technique

# Course Program

Detailed PRO combined manicure algorithm: clean cuticle, precise cutting, proper leveling, polish application under the cuticle without flooding.

Working with problematic nails: weak, cracked, deformed, or with unbalanced architecture

Reinforcement and free edge reconstruction techniques

Introduction to different types of rigid materials (gel, polygel): properties, uses, and applications

Practice with two real models, under professional supervision

All materials and tools for the training are included in the course price

Individual correction of mistakes and personalized recommendations to improve your technique

# WHAT TO EXPECT SPECIFICALLY?

10:00 – **Theory + Demonstration**

Master the **combined manicure** with a professional approach:

Step-by-step detailed algorithm

Proper preparation of the natural nail

Techniques for flawless polish application

Strategies for working with weak and damaged nails

Types of base coats: properties and uses

Free edge reinforcement and surface leveling

Precise application under the cuticle

11:15 – **Practice** with the first **model**

Application of the learned techniques under instructor supervision

14:15 – 15:00 Lunch break

15:00 – 15:45 **Advanced Theory + Demonstration**  
**Specialized techniques** for flawless results:

- Use of hard materials for reinforcement and repair.
- Shape reconstruction and resolution of complex cases.
- Corner extension and adjustment of lateral sidewalls.

15:45 – **Practice** with the second **model**

Refinement of techniques with a second practical case

19:00 – Diploma ceremony

 Certification and recognition of your PRO training

 A course designed for professionals who want to perfect their skills and elevate their technical level in combined manicure

This course is your step toward a new level. We will help you go from “I do what I can” to “I work with technique, confidence, and professionalism”
